

2021 Projected Power Supply Portfolio - Fuel Composition

Revised: 2/12/2021

The Zeeland BPW's 2021 forecasted power supply portfolio fuel mixture is provided in the chart below. Energy forecasted to be received from resources in which the BPW has an ownership stake or purchase power agreement (PPA) will have been allocated accordingly. The balance of the BPW's annual energy requirement, a significant portion, is supplied through bilateral purchases and market transactions within the MISO market. Because the energy sources of those transactions are not specifically identified, fuel mixture data for the MISO central region during 2020 was used to forecast these contributions, and allocated accordingly. The data below does not include the purchase or sale of Renewable Energy Credits (REC's) used to satisfy the State of Michigan's renewable energy portfolio compliance requirements.
