

2023 Projected Power Supply Portfolio - Fuel Composition

Revised: 5/23/2023

The Zeeland BPW's 2023 power supply portfolio fuel composition is provided below, which is based on a combination of actual (January – April) and forecasted data. Energy received from resources in which the BPW has an ownership stake or purchase power agreement (PPA) have been allocated accordingly. The balance of the BPW's annual energy requirement, a significant portion, is supplied through bilateral purchases and market transactions within the MISO market. Because the sources of those transactions are not specifically identified, fuel mixture data for the MISO Central Region from January through April of 2023 was used to allocate those accordingly.
